

Task 7.4 GitHub workflow reflection

The work was split as follows:

Rafael de gouveia:u25054903

Task 4.2 the reassignComponent in ComponentUtils helper class, Task 5.4 Signature Event Scenario Sequence Diagram, the entirety of Task 6 the Doxygen Documentation and Comments, the entirety of Task 7 the Git, GitHub Workflow and Report Reflection and finally the makefile.

Johannes Petrus: u25407725

Task 3 the Observer Notification System Implementation, Task 4.3 implementing the state conditions, Task 4.4 implementing 3 original event-specific features, Task 5.2 the Cascading Event Notification Sequence diagram, Task 5.3 the Conditional Event Response Sequence diagram and main.cpp

Sergio Ferreira: u25247418

The entirety of Task 1 the Concept, Architecture and UML Diagram, the entirety of Task 2 the Composite Structure Implementation and Task 5.1 the Building and Registering Diagram.

Changes were implemented by pulling the original files and making edits on them before repushing them with the fixes.

We used commits to collaborate by making detailed commit messages that let our teammates know what changes were made as shown below where Johannes and Sergio both uploaded their H files or made changes to it and where Rafael then pulled them and added the doxy comments to the h files.

Added Subject interface. u25407725 authored yesterday	Verified 270159b
Added Observer interface. u25407725 authored yesterday	Verified 31a365a
Add Doxygen documentation to Notice, Observer, and Subject interfaces DrRafeee committed yesterday	6b6ad89
Fix duplicate WARN_LOGFILE setting; generate clean HTML docs for Notice, Observer, Subject, ComponentUtils DrRafeee committed yesterday	79747a0
Update EventGroup logic Serg312 committed 5 hours ago	d2bc3b9
Fix repo structure: restore correct include/src layout Serg312 committed 5 hours ago	6dc23ed
